To the SCC task force

Dear All,

We hope you all had a good weekend!

Please find attached the revised, shortened SCC examples for further discussion with ECHA on the SCC guidance & non-ferrous metals specificities. As agreed during our meeting of December 16, we have tried to highlight in a more (ECHA-)reader friendly format the 4 key specificities that we would like ECHA and authorities to take into consideration when evaluating SCC for intermediates in our sector, i.e.

- existing hazard knowledge and its use in the design of Rigorous containment
- physical forms associated with low emission potential (massive, wet cake)
- LEV as rigorous containment
- PPE for other purposes than cleaning and maintenance

Thanks a lot to Katia, Daniela, Aggie, Caroline and France for their help!

This document has been sent to Watze de Wolf, Derek Knight and Jukka Malm in ECHA as recommended by Derek Knight. To avoid the 'full examples' getting lost, we have also re-sent them to ECHA as an annex with a reference to this annex where relevant in the short document. The only difference compared to October is that the Doré example has now been added in annex.

Let's hope that ECHA will react by proposing a discussion and a way forward. We shall naturally keep you updated

Have an excellent day !

Katia and Vio
