

ID Card

Diamminedichloropalladium

Version 13 December 2016

Notes:

- This ID card is used to support the substance sameness discussions in SIEFs and to describe the substance to the best of the SIEF members' knowledge.
- It also aims at grouping communications relevant to the request of available data or information, the approval of the proposed Lead Registrant and the registration strategy with the SIEF.
- It is the responsibility of each individual registrant to identify their substance and to report company-specific identity in their Registration Dossier (section 1 of IUCLID).

DISCLAIMER

All data and information contained in this document shall be treated by the receiving party (i) in full confidence with the adequate respect of any confidential and/or proprietary nature of such information and (ii) only in the framework of the purpose of agreeing on substance sameness, Lead Registrant and overall REACH Strategy for the concerned Substance under REACH (the 'Purpose').

The receiving party (and any representative) shall not be allowed to use or circulate any or all parts of this document for any other purpose than the Purpose, without the prior written consent of the European Precious Metals Federation (EPMF).

The content provided in this document is given for the Purpose and as such, no guarantee or warranty whatsoever (expressed or implied) is given as to its accuracy, completeness, merchantability or fitness for any particular purpose which the receiving party may have. In any case, any use by the receiving party would be made at its sole risk and liability.

1. Identification of the substance

Table 1. Identification of the substance

	Original (in EC inventory)
Name	Diamminedichloropalladium
EC number	238-269-3
CAS number	14323-43-4
Description	Not available
Composition type	Mono-constituent substance

2. Synonyms and other identifiers of the substance

Table 2. Synonyms and other identifiers of the substance

IUPAC name	Palladium(2+) dichloride
CAS name	Palladium, diamminedichloro-
Abbreviations	DDP
Other commercial or international names	Diammine palladium (II) chloride Chloropalladosamine Palladium (II) diammine dichloride Palladium diammine dichloride Palladium(2+) chloride ammoniate (1:2:2)
Other identity codes	

3. Substances (with core identifiers) also falling under this substance (with justification)

None

4. Information related to molecular and structural formula of the substance

Table 3. Information related to molecular and structural formula of the substance

Molecular formula	H6Cl2N2Pd
Structural formula	$\begin{array}{c} \text{NH}_3 \\ \\ \text{--- Cl - Pd}^{2+} \text{--- Cl ---} \\ \\ \text{NH}_3 \end{array}$
Smiles notation	[Pd+2].[Cl-].[Cl-].N.N
Optical activity	Not applicable
Typical ratio of (stereo) isomers	Major phase: Trans*
Molecular Weight / Molecular Weight range	211,39 g/mol

* IR spectra can be used to estimate the presence of cis- and trans-isomers of Diamminedichloropalladium: in the IR spectrum of trans-Diamminedichloropalladium, a single peak is seen at 496 cm⁻¹ whereas for cis-Diamminedichloropalladium a double peak is seen.

5. Typical composition of the substance

Table 4. Typical composition

	Name	Symbol / Formula	Min & Max concentrations (%) [§]	Typical concentration (%) ^{§§}
Main constituent(s)*	Diamminedichloropalladium	H6Cl2N2Pd	80 - 100 [§]	> 99,4
Impurity(ies)[#]	Water (residual damp)	H2O	0 - 20	< 0.6
	Several minor (especially metallic) impurities which do not affect the classification of the substance because of their non-hazardous nature or because they do not exceed the classification cut-off limits in the substance	e.g. Ag, Au, Cu, Ir, Pb, Pt, Rh, Ru	0 - 0,1	< 0,05

* ≥ 80 % (w/w) for mono-constituent substances; ≥ 10 % (w/w) and < 80 % (w/w) for multi-constituent substances.

[#] An impurity is an unintended constituent present in a substance, as produced. It may originate from the starting materials or be the result of secondary or incomplete reactions during the production process. While impurities are present in the final substance, they were not intentionally added.

[§] Concentration ranges define the substance sameness criteria agreed by all Consortium Members in preparation of the communication with other SIEF members.

^{§§} Typical concentration refers to the representative sample used for testing.

[§] Corresponds to 50,4 % Pd.

The composition given above is typical and should therefore represent the majority of Diamminedichloropalladium as manufactured and/or imported in the EEA market. Diamminedichloropalladium containing less than 99,4 % Diamminedichloropalladium may still be considered to be the same for the purpose of registration under REACH and may be referred to as impure Diamminedichloropalladium to distinguish it from the typically pure Diamminedichloropalladium.

6. Information on appearance, physical state and properties of the substance

Table 5. Appearance / physical state / properties of the solid substance

Physical state	Solid
Physical form*	Crystalline
Appearance	Orange powder
Particle size**	Fine to coarse powder
Does the solid hydrolyse?#	No
Is the solid hygroscopic?§	No

* Crystalline form: solid material whose constituent atoms, molecules, or ions are arranged in an ordered pattern extending in all three spatial dimensions. Amorphous form: solid material whose constituent atoms, molecules, or ions are randomly arranged.

** Nanoform: particles in the size range 1 - 100 nm (for full definition of a nanomaterial, see <http://ec.europa.eu/environment/chemicals/nanotech/index.htm#definition>). Fine powder: particles in the size range 100 – 2.500 nm. Coarse powder: particles in the size range 2.500 nm – 1 mm. Massive object: particles in the size range > 1 mm.

Hydrolysis: decomposition (cleavage of chemical bonds) by the addition of water.

§ Hygroscopic substance: readily attracts moisture from its surroundings in open air, through either absorption or adsorption. Cf. also water/moisture content in Table 4.

7. Analytical data

Annex VI of REACH requires the registrant to describe the analytical methods and/or to provide the bibliographical references for the methods used for identification of the substance and, where appropriate, for the identification of impurities and additives. This information should be sufficient to allow the methods to be reproduced.

Table 6. Analytical methods for identification of the substance

Parameter / Method	Recommended for substance identification and sameness check	Applicable	Not applicable or not recommended
Elemental analysis			
ICP (ICP-MS or ICP-OES)	X		
Atomic absorption spectroscopy (AAS)			
Glow discharge mass spectrometry (GDMS)			
Molecular analysis			
Infrared (IR) spectroscopy	X		
Raman spectroscopy			
Mineralogical analysis			
X-Ray Fluorescence (XRF)		X	
X-Ray Diffraction (XRD)	X		
Morphology and particle sizing			
Electron microscopy (SEM, TEM, REM)* #			
Laser diffraction* #	X		
Particle size by other means (e.g. sieve analysis)#			
Surface area by N-BET* #	X		
Other			

--	--	--

* Analytical techniques particularly (but not exclusively) relevant for nanomaterials.

The choice of the technique for particle size depends on the size of the material as manufactured/imported/placed on the market/used.

8. Lead Registrant

Heraeus Deutschland GmbH & Co. KG (Germany) volunteers to be the Lead Registrant for Diamminedichloropalladium. The EPMF will provide support to the Lead Registrant as laid down in the EPMF Agreement.

9. REACH Strategy

The table below presents the overall Registration Strategy for Diamminedichloropalladium based on the information available to the EPMF by the date given above on the document.

The Registration Dossier will be prepared for the highest substance status (information requirements associated to a substance or Article 10 Registration being higher than an intermediate handled under strictly controlled conditions or Article 17 or 18 one) and associated tonnage band.

The recap below therefore reflects the scope of work of the EPMF for Diamminedichloropalladium and sets the minimum and maximum set of information that will be gathered and/or produced when preparing the Registration Dossier for Diamminedichloropalladium as described in this ID Card.

If higher information requirements are necessary, these can be included in the Registration dossier (if EPMF is made aware of these additional requirements in-time) as an update to the already submitted dossier.

Table 7. REACH strategy for the substance (basis for REACH Registration preparation)

Item	Description
REACH category	Mono-constituent substance
Highest status	Substance
Highest tonnage band	10-100 t/a
Information requirements	Available / Existing + Annex VII + Annex VIII
Existing classification*	Acute Tox. 4 (H302) (oral) Eye Dam 1 (H318) Aquatic Acute 1 (H400) Aquatic Chronic 1 (H410) Acute M-factor 100 Chronic M-factor 10
Registration deadline	2018

*For the pure form, as in the REACH registration dossier

10. Scope of the Registration Dossier

The uses included in this Registration Dossier are listed on the [EPMF website](#)

11. Analytical reference information

Below the results of IR analysis of a reference sample used for testing.

Spectrometer: Infrared spectrometer Tensor 27

Spectral Range: 4000 – 300 cm⁻¹

Resolution: 2 cm⁻¹

Scans: 32 scans

Temperature: ambient

Sample preparation: Nujol mull / CsJ

Figure 1. IR spectrum of Diamminedichloropalladium
