

ID Card

Matte, precious metal

Version 8 April 2014

Please note that discussions on the ID Cards are currently ongoing.
Should you need further information / detail, please contact info@epmf.be
The content of this ID Card may be adjusted as the Refinables Project develops.

Notes:

- This ID card is used to support the substance sameness discussions in SIEFs and to describe the substance/group to the best of the SIEF members' knowledge.
- It also aims at grouping communications relevant to the request of available data or information, the approval of the proposed Lead Registrant and the registration strategy with the SIEF.
- It is the responsibility of each individual registrant to identify their substance and to report company-specific identity in their Registration Dossier (section 1 of IUCLID).

DISCLAIMER

The proper identification and characterisation of a substance or intermediate is the responsibility of each registering legal entity. All data and information contained in this document shall be treated by the receiving party (i) in full confidence with the adequate respect of any confidential and/or proprietary nature of such information and (ii) only in the framework of the purpose of agreeing on substance sameness, Lead Registrant and overall REACH Strategy for the concerned Substance under REACH (the 'Purpose'). The receiving party (and any representative) shall not be allowed to use or circulate any or all parts of this document for any other purpose than the Purpose, without the prior written consent of the European Precious Metals Federation (EPMF). The content provided in this document is given for the Purpose and as such, no guarantee or warranty whatsoever (expressed or implied) is given as to its accuracy, completeness, merchantability or fitness for any particular purpose which the receiving party may have. In any case, any use by the receiving party would be made at its sole risk and liability.

1. Identification of the group

Table 1. Identification of the group

	Proposed by EPMF Refiners Work Group	Original (in EC inventory)
Name	Matte, precious metal	Matte, precious metal
EC number	308-506-6	308-506-6
CAS number	98072-52-7	98072-52-7
Description	Substance resulting from the smelting of precious metals and its alloys obtained from primary and secondary sources and including recycled plant intermediates. Matte, precious metal is composed primarily of base metal sulphides containing precious metals and may contain other residual non-ferrous metals and their compounds in varying concentrations.	None

N.B.: The description proposed above will be further detailed by EPMF for Registration purposes.

2. Synonyms and other identifiers of the group

None

3. Substances (with core identifiers) also falling under this group (with justification)

Although mattes resulting from other metals refining processes may be very similar to precious metals matte, they are not listed here as they are covered by other consortia and must hence not be registered using the same information or in the same Registration Dossier.

4. Usual composition of the substance

Table 2. Usual composition

Type	Name of the element	Symbol	Species present	Typical concentration (%)	Concentration range (%)
Precious metals	Silver	Ag	Sulphides	10,8	0,034 - 25
	Gold	Au	Metallic? Sulphides?	1,7	0 - 5
	Iridium	Ir	Sulphides	1,6	0 - 5
	Palladium	Pd	Sulphides	2,1	0 - 5
	Platinum	Pt	Sulphides	1,7	0 - 5
	Rhodium	Rh	Sulphides	1,6	0 - 5
Other metals	Ruthenium	Ru	Sulphides	1,6	0 - 5
	Aluminium	Al	Al ₂ O ₃	0,68	0 - 2,4
	Antimony	Sb	Sulphide?	1,1	0 - 2,5
	Arsenic	As	As ₂ O ₃ , As ₂ O ₅ ?	3	1,1 - 6,2
	Bismuth	Bi	Sulphide?	0,5	0 - 2,5
	Carbon	C		0,12	0 - 0,62
	Calcium	Ca	CaO	1,2	0 - 4,4
	Cadmium	Cd	CdS	0,019	0 - 0,09
	Cobalt	Co	CoS	1,3	0 - 6,5
	Chromium	Cr	Cr ₂ O ₃	1	0 - 2,5
	Copper	Cu	CuS	16	6,4 - 32
	Iron	Fe	Sulphides and bound to spinels	13	0 - 32
	Lead	Pb	Sulphide	6,3	0,5 - 10
	Magnesium	Mg	MgO	0,28	0 - 1
	Manganese	Mn		0,055	0 - 0,27
	Nickel	Ni	Metallic?	15	0,31 - 32
	Sulphur	S	Metal sulphides	14	0 - 30
	Selenium	Se		0,074	0 - 0,37
	Sodium	Na		0,18	0 - 0,91
	Silicon	Si		3,9	0 - 15
	Tellurium	Te	Metallic?	1,7	0 - 5,7
	Titanium	Ti		0,04	0 - 0,19
Tin	Sn	Sulphide?	0,91	0 - 2,1	
Zinc	Zn	ZnS	0,55	0 - 2,7	
Total				102	

N.B.: Classification drivers are indicated in red (see also Table 6).

Metal species were determined based on information available to registrants and/or mineralogical analysis (by means of XRD analysis).

The composition given above represents the usual elemental/compound content available to the Members of the EPMF by 9 February 2012. This usual content represents the majority of the Matte, precious metal that is placed on the EEA market.

In a UVCB substance, the number of constituents is relatively large and/or; the composition is, to a significant part, unknown and/or; the variability of composition is relatively large or poorly predictable.

Hence, concentration ranges outside the ones given above do not exclude sameness and are usually referred to as unusual or exceptional situations. Each potential registrant is responsible for performing its own elemental analysis.

5. Information on appearance, physical state and properties of the substance

Table 3. Appearance / physical state / properties of the substance

Physical state	Solid
Appearance	Grey to black
Particle size*	Massive object

* Fine powder: particles in the size range 100 – 2.500 nm. Coarse powder: particles in the size range 2.500 nm – 1 mm. Massive object: particles in the size range > 1 mm.

6. Analytical data

Annex VI of REACH requires the registrant to describe the analytical methods and/or to provide the bibliographical references for the methods used for identification of the substance and, where appropriate, for the identification of impurities and additives. This information should be sufficient to allow the methods to be reproduced.

In addition to analytical data, all registrants should use expert judgment and process knowledge to characterize their substance.

Table 4. Analytical methods for identification of the substance

Parameter / Method	Recommended for substance identification and sameness check	Applicable	Not applicable or not recommended
Elemental analysis			
ICP (ICP-MS or ICP-OES)	X		
Atomic absorption spectroscopy (AAS)			
Glow discharge mass spectrometry (GDMS)			
Molecular analysis			
Infrared (IR) spectroscopy			
Raman spectroscopy			
Mineralogical analysis			
X-Ray Fluorescence (XRF)			
X-Ray Diffraction (XRD)	X		
Morphology and particle sizing			
Optical microscopy and electron microscopy (SEM, TEM, REM)* #	X		
Laser diffraction* #			
Particle size by other means (e.g. sieve analysis)#			
Surface area by N-BET* #			

Other			
Magnetite analyser		X	
S/C analyzer		X	
Separation technique: ion exchange chromatography		X	

* Analytical techniques particularly (but not exclusively) relevant for nanomaterials.

The choice of the technique for particle size depends on the size of the material as manufactured/imported/placed on the market/used.

7. Lead Registrant

Glencore Nikkelverk AS (Norway) volunteers to be the Lead Registrant for this intermediate. The European Precious Metals Federation (EPMF) will provide support to the Lead Registrant as laid down in the EPMF Agreement.

8. REACH Strategy

The table below presents the overall Registration Strategy for Matte, precious metal based on the information available to the EPMF by the date given above on the document.

The Registration Dossier will be prepared for the highest substance status (information requirements associated to a substance or Article 10 Registration being higher than an intermediate handled under strictly controlled conditions or Article 17 or 18 one) and associated tonnage band.

The recap below therefore reflects the scope of work of the EPMF for Matte, precious metal and sets the minimum and maximum set of information that will be gathered and/or produced when preparing the Registration Dossier for Matte, precious metal as described in this ID Card.

If higher information requirements are necessary, these can be included in the Registration dossier (if EPMF is made aware of these additional requirements in-time) as an update to the already submitted dossier.

Table 5. REACH strategy for the group (basis for REACH Registration preparation)

Item	Description	Comment
SIEF	As pre-registered	
REACH category	UVCB	The composition of Matte, precious metal is sulphidic, and can hence easily be fully determined by the applicable analytical technique. The variability of the composition of Matte, precious metal both intra- and inter-registrants is large as: The Matte, precious metal manufactured via a specific smelting process will be influenced by the variability of the feed material smelted to produce Matte, precious metal. Matte, precious metal is truly a substance of variable composition.
Highest status	Non-SCC intermediate	At least one Member of the EPMF has declared this material as an intermediate not handled under strictly controlled conditions (SCC), meaning an Article 10 dossier is required for joint submission.
Intermediate status		Matte, precious metal is <u>intentionally manufactured</u> to be <u>chemically transformed</u> into another substance. A specific smelting process is designed to produce Matte, precious metal, which is further smelted/converted to produce pure precious metal. It is hence truly an in-process intermediate in the production of pure precious metals.

Highest tonnage band	100 – 1000 t/a	
Information requirements	Available / Existing + Annex VII – VIII – IX	
Existing classification	See Table 6	Classifications for Matte, precious metal are proposed in Table 6 as grouped classifications based on composition profile. Compositions or triggers associated to each classification provide a non-exhaustive list of those constituents which can be present in the Refinable.
Registration deadline	2010	Matte, precious metal was registered as an SCC intermediate in 2010 (Article 17/18 dossier) and will be updated to a full substance registration (Article 10 dossier) in 2014

Table 6. Classification for the group

	Classification CLP	Composition / classification drivers
1	Carc. 1B, Repro. 1A, STOT Rep 2 (driver: CdS), ENV Ch 2	<p>Ni powder < 1%; CoS < 1% Cd: 0,1% - 1%; Pb comp: 0,05% - 0,5%</p> $100 / ((\%As + \%Se\ comp + \%Te/Te\ comp)/100 + (\%Cd + \%Pb\ comp + \%Sb/Sb\ comp + \%Pb\ powder)/500) > 2000\ mg/kg$ $100 / ((\%As + \%Se\ comp)/700 + (\%Pb\ comp + Pb\ powder + \%Sb/Sb\ comp)/4500) > 5\ mg/l$ $(\%Cu \times 0,024 + \%Pb \times 0,044 + \%Co \times 0,11) < 1$ $(\%Cu \times 0,00062 + \%Pb \times 0,048 + \%Co \times 0,69) * 10 > 1$
2	Carc. 2, Repro. 1A, STOT Rep 1 (driver: Ni), ENV Ch 2, Skin sens. 1	<p>Ni powder \geq 10% Pb comp \geq 0,5%; Cd < 0,1%</p> $100 / ((\%As + \%Se\ comp + \%Te/Te\ comp)/100 + (\%Cd + \%Pb\ comp + \%Sb/Sb\ comp + \%Pb\ powder)/500) > 2000$ $100 / ((\%As + \%Se\ comp)/700 + (\%Pb\ comp + Pb\ powder + \%Sb/Sb\ comp)/4500) > 5\ mg/L$ $(\%Cu \times 0,024 + \%Pb \times 0,044 + \%Co \times 0,11) < 1$ $(\%Cu \times 0,00062 + \%Pb \times 0,048 + \%Co \times 0,69) * 10 > 1$
3	Carc. 2, Repro. 1A, STOT Rep 1 (driver: Ni), ENV Ac 1, ENV Ch 1, Skin sens. 1, Acute tox oral+inh 4	<p>Ni powder \geq 10% Pb comp \geq 0,3%; Cd < 0,1%</p> $100 / ((\%As + \%Se\ comp + \%Te/Te\ comp)/100 + (\%Cd + \%Pb\ comp + \%Sb/Sb\ comp + \%Pb\ powder)/500)\ between\ 300 - 2000\ mg/kg$ $100 / ((\%As + \%Se\ comp)/700 + (\%Pb\ comp + Pb\ powder + \%Sb/Sb\ comp)/4500)\ between\ 1\ and\ 5\ mg/L$ $(\%Cu \times 0,024 + \%Pb \times 0,044 + \%Co \times 0,11) > 1$ $(\%Cu \times 0,00062 + \%Pb \times 0,048 + \%Co \times 0,69) > 1$

N.B.1: All constituents assumed to be in metallic or sulphide form

N.B.2: Classification drivers are (worst-case) assumptions and do not necessarily represent real species/mineralogical composition

N.B.3: All classification groups have a CMR profile

9. Scope of the Registration Dossier

The uses included in this Registration Dossier are summarised in the table below and accompanied with the appropriate text.

Table 7. Reported uses of the substance

Description of use	Sector of Use (SU)	Process Category (PROC)	Environmental Release Category (ERC)
Manufacture of an intermediate	NA	<ul style="list-style-type: none">• PROC 1: Use in closed process, no likelihood of exposure• PROC 2: Use in closed, continuous process with occasional controlled exposure• PROC 3: Use in closed batch process (synthesis or formulation)• PROC 4: Use in batch and other process (synthesis) where opportunity for exposure arises• PROC 5: Mixing or blending in batch processes for formulation of preparations and articles (multistage and/or significant contact)• PROC 8b: Transfer of substance or preparation (charging/discharging) from/to vessels/large containers at dedicated facilities• PROC 9: Transfer of substance or preparation into small containers (dedicated filling line, including weighing)• PROC 15: Use as laboratory reagent• PROC 21: Low energy manipulation of substances bound in materials and/or articles• PROC 22: Potentially closed processing operations with minerals/metals at elevated temperature. Industrial setting• PROC 23: Open processing and transfer operations with minerals/metals at elevated temperature• PROC 24: High (mechanical) energy work-up of substances bound in materials and/or articles• PROC 26: Handling of solid inorganic substances at ambient temperature• PROC 27b: Production of metal powders (wet processes)	<ul style="list-style-type: none">• ERC 1: Manufacture of substances
